

Automated Network Request Management in ServiceNow

Interface Design

1. Introduction

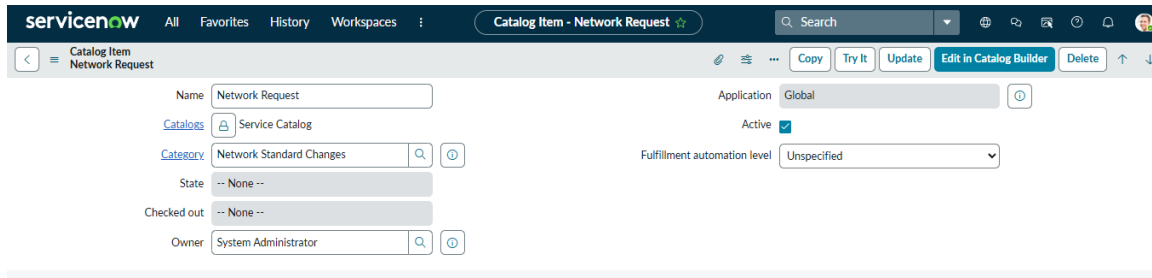

Interface design in ServiceNow focuses on creating intuitive, user-friendly, and visually consistent interfaces that enhance the overall user experience. This phase involves designing catalog forms, lists, and portal views that align with business requirements while ensuring ease of use, accessibility, and clarity for end users.

2. Service Catalog Creation

Objective

To create a structured and accessible Service Catalog item for network-related requests.

Procedure

The screenshot shows the ServiceNow interface for creating a new Catalog Item. The top navigation bar includes 'All', 'Favorites', 'History', and 'Workspaces'. The main header is 'Catalog Item - Network Request'. The form fields are as follows:

Field	Value
Name	Network Request
Application	Global
Active	<input checked="" type="checkbox"/>
Fulfillment automation level	Unspecified
Category	Network Standard Changes
State	-- None --
Checked out	-- None --
Owner	System Administrator

Figure 2.1: Creation of Network Request Service Catalog Item

- Navigate to **Application Navigator**.
- Click **All** and search for **Service Catalog**.
- Select **Maintain Items**.
- Click **New**.
- Enter the following details:
 - **Name:** Network Request

- **Catalog:** Service Catalog
- **Category:** Network
- **Short Description:** Network Request Management
- Click **Save**.

This catalog item acts as the primary interface for user interaction.

3. UI Customization Tools Used

- Service Catalog Forms
- UI Policies
- UI Actions

4. Conclusion

The interface design phase ensures that users interact with a clean, structured, and intuitive catalog interface. Proper design reduces user errors, improves adoption, and enhances overall service delivery efficiency.
