Execution Roadmap

1. Description

The Execution Roadmap defines the step-by-step milestones planned for implementing the Metro Ticket Generating System. It ensures structured development, timely delivery, and systematic validation.

2. Key Milestones

1. **Service Catalog Form Setup**

   - Creation of "Book A Metro Ticket" catalog item
   - Configuration of required variables

2. **Fare Calculation Logic Implementation**

   - Development of Catalog Client Scripts
   - Dynamic fare computation based on selections

3. **QR Code Integration**

   - Generation of digital QR tickets upon submission

4. **Station Details Mapping**

   - Linking source and destination stations using reference tables

5. **UI Page Design**

   - Service Portal customization for smooth navigation

6. **User Acceptance Testing (UAT)**

   - Functional testing of booking, fare, and QR generation

7. **Deployment**

   - Final rollout after successful testing

3. Summary

The execution roadmap ensures a phased, controlled, and quality-driven implementation of the metro ticketing solution.
